# Create Engaging Documentation Experiences with Netlify and Paligo CCMS

Deliver accurate, up-to-date documentation directly to your Netlify sites

Netlify is a web hosting platform that empowers developers to quickly create and deploy frontend web and mobile experiences to a global network. When integrated with Paligo CCMS companies can easily deliver accessible, up-to-date documentation directly to Netlify sites.
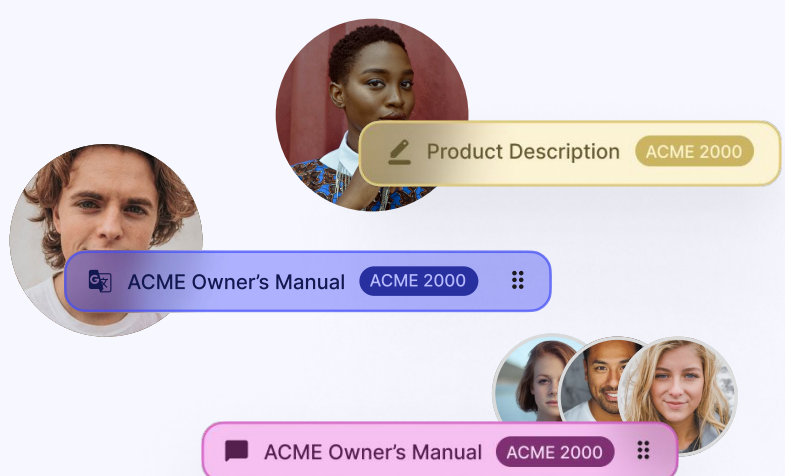

Benefits for the Business

Paligo empowers technical documentation teams to streamline content creation and delivery, reducing manual updates and ensuring accuracy. Eliminate content silos and publish documentation to Netlify, reducing publishing time and freeing up resources for other critical tasks.

Benefits for Content Creators

Author and manage high-quality content using Paligo's intuitive structured authoring environment, removing styling from the content creation process. Reuse content to speed up the authoring and significantly reduce publishing time.
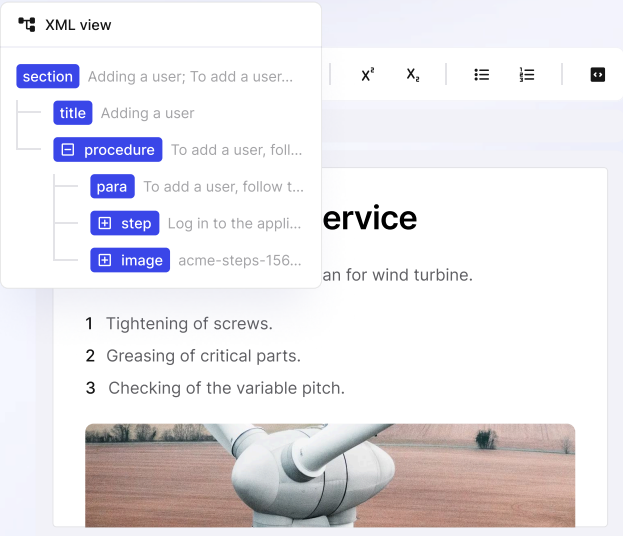

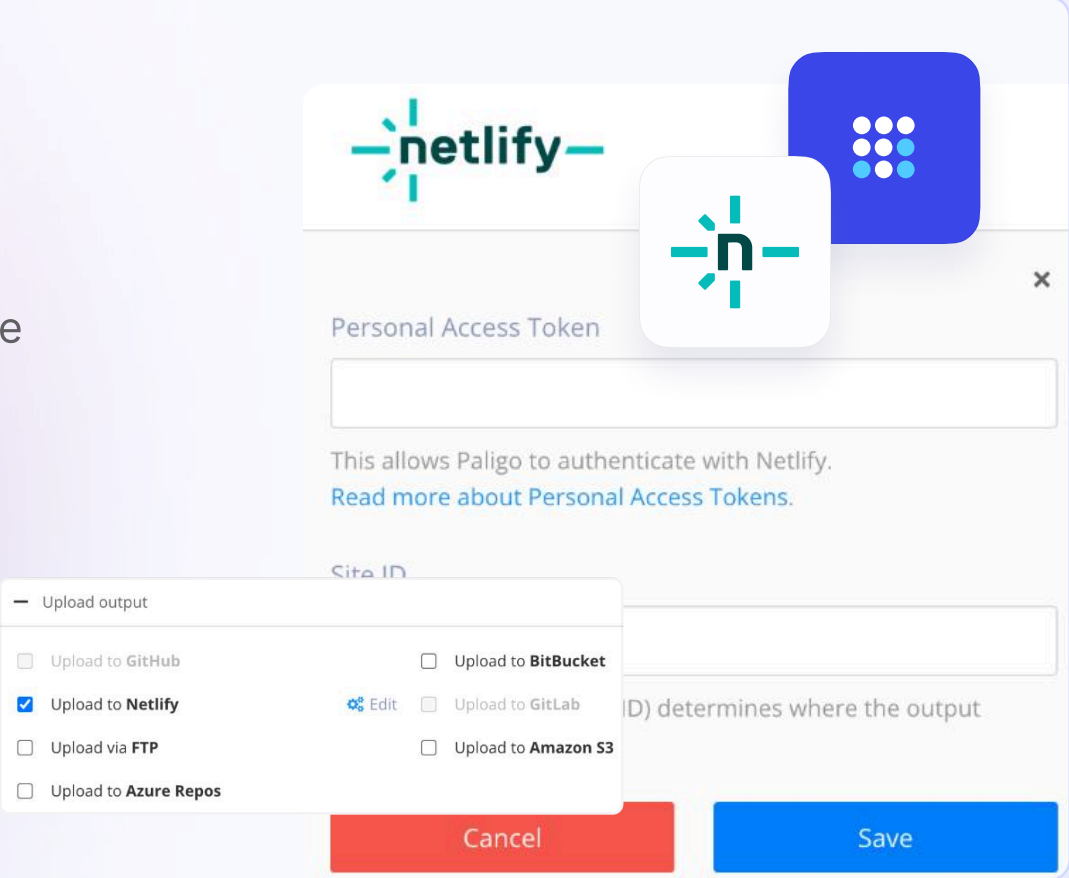

How the Integration Works

The Netlify/Paligo integration requires a Netlify personal access token (PAT) and Site ID.

Publishing Options

- Publish a complete publication or a single topic.
- Content is published as HTML5
- Set up multiple Netlify sites to publish content to.
- Upload to Netlify to publish your document to your Netlify site

netlify

Personal Access Token

This allows Paligo to authenticate with Netlify.
